Bag Machine Printer

A customer was unsatisfied with their current Markem Image Thermal Transfer Overprinters (TTO). The maintenance team spent several hours each week working on them. The solution we provided is a cartridge-based thermal inkjet printer. Integrations have been performed on Triangle and Pacmac bag machines.

Benefits:

Each cartridge is a new printhead

No ribbon, tension rollers, or springs to adjust

No need for pad on opposite side of TTO

Quicker and easier to change cartridges

Create messages on controller or transfer from computer via USB

Operation:

Power, print signal, and I/O cable connect to PLC

Encoder used in same manner as standard TTO printer

Printhead is slid off bracket and placed in stainless steel cabinet (where controller is housed) before washdown

Other Information:

Lifetime warranty on all parts (doesn't cover water damage or negligence)

Local technicians with over 100 years' experience in industrial coding equipment
